Canvas3D Figure Variants Preview

Select your preferred variant for each figure

October 13, 2026

Instructions: Each figure below is labeled `figX_name_V` where `X` is the figure number, `name` is the module, and `V` is the variant (A/B/C). After choosing, we will extract the corresponding code into the final `method.tex`.

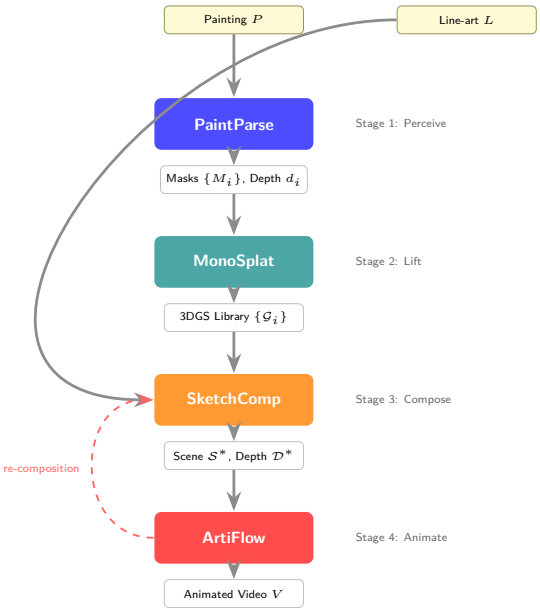

Figure 1: **Canvas3D overview (Variant A).** Flat modern design with color-coded modules and stage annotations.

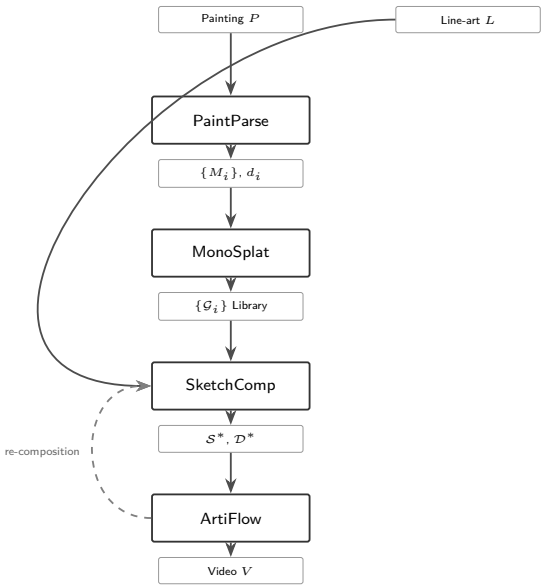

Figure 2: **Canvas3D overview (Variant B).** Minimal monochrome line-art style, suitable for black-and-white printing.

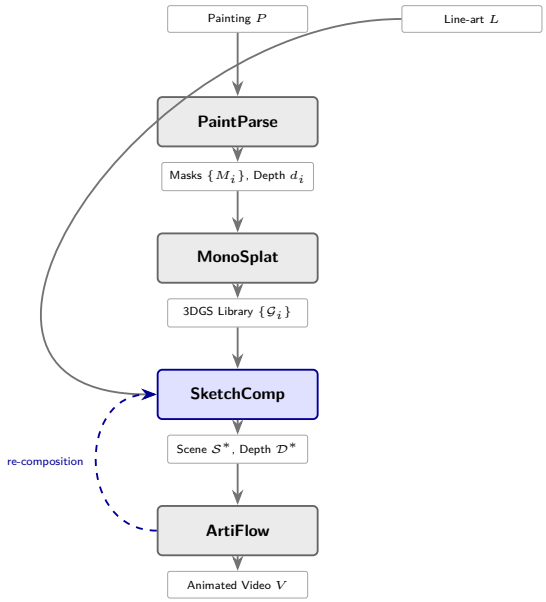

Figure 3: **Canvas3D overview (Variant C).** Academic grayscale with blue accent highlighting the novel SketchComp module.

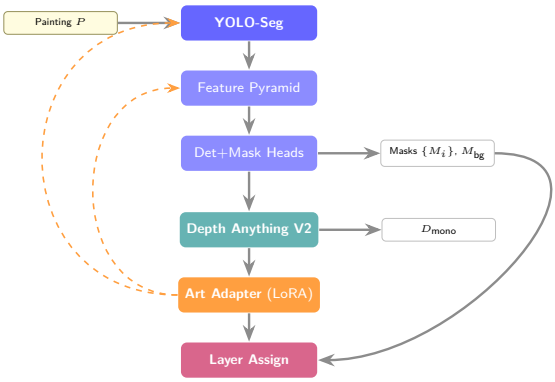

Figure 4: **PaintParse (Variant A).** Modern flat colors: blue for segmentation, teal for depth, orange for art-domain adapters.

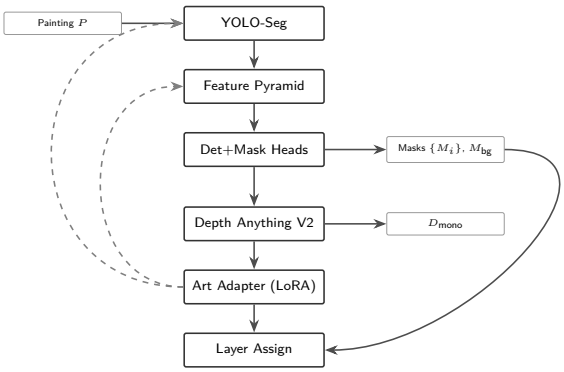

Figure 5: **PaintParse (Variant B).** Monochrome minimal style, all modules white with thin outlines.

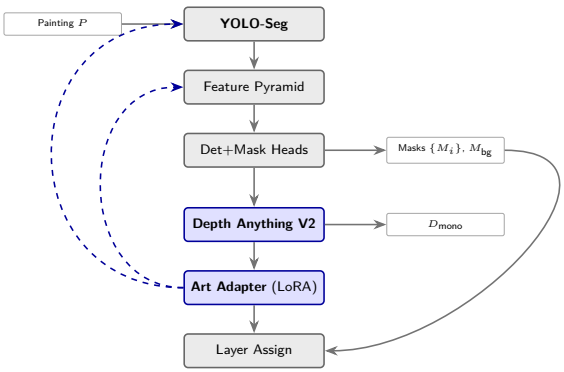

Figure 6: **PaintParse (Variant C).** Grayscale with blue accent on depth/adapter branches, emphasizing the novel art-domain adaptation.

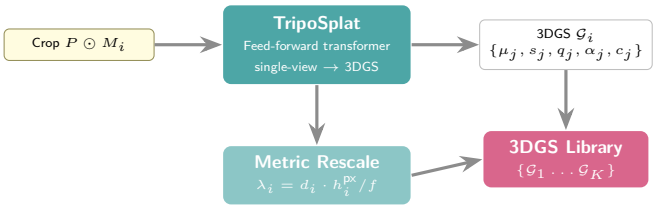

Figure 7: **MonoSplat (Variant A).** Flat style with teal TripoSplat core and purple library, emphasizing the metric rescaling step.

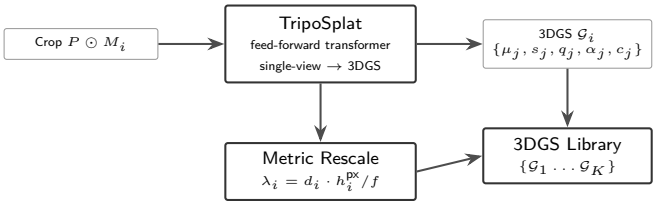

Figure 8: **MonoSplat (Variant B).** Monochrome line style, no fills, maximum clarity for print.

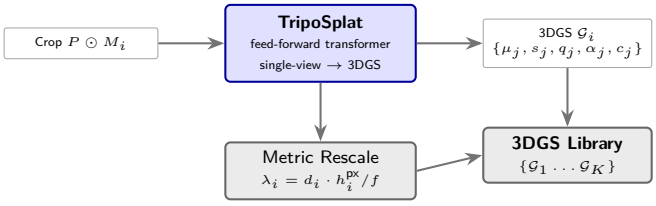

Figure 9: **MonoSplat (Variant C).** Grayscale with blue accent on the core TripoSplat module, Gaussian parameterization visible.

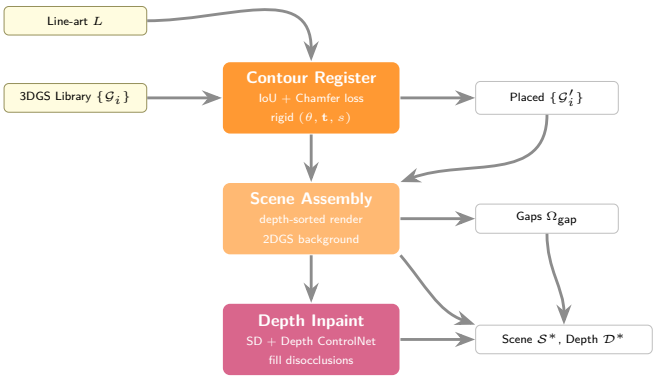

Figure 10: **SketchComp (Variant A).** Flat colors: orange for registration/assembly, purple for inpainting, emphasizing the two-stage compose-then-fill process.

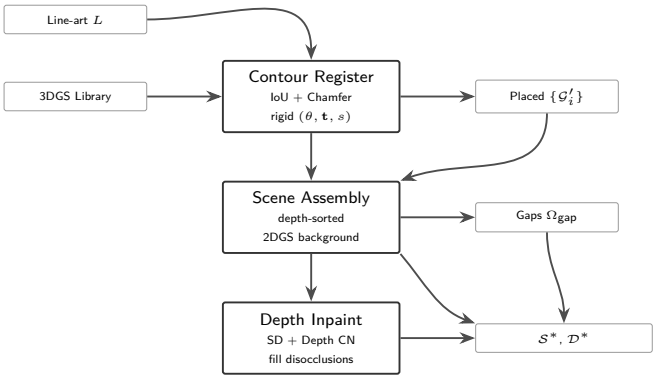

Figure 11: **SketchComp (Variant B).** Monochrome line style, no fills, maximum clarity.

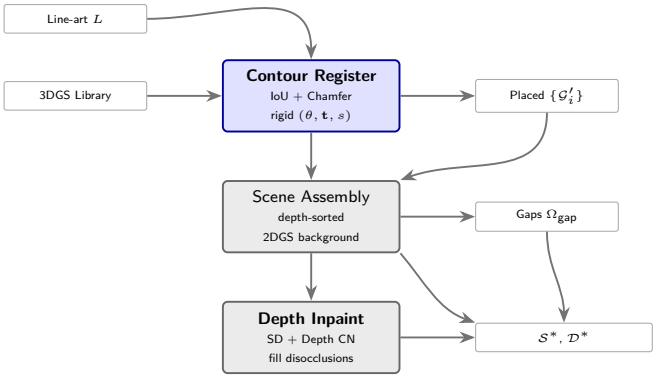

Figure 12: **SketchComp (Variant C).** Grayscale with blue accent on the novel contour-registration module, highlighting the contribution.

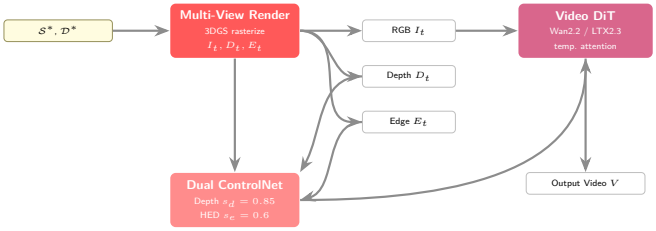

Figure 13: **ArtiFlow (Variant A).** Flat style with red for rendering, darker red for ControlNet, purple for the diffusion model.

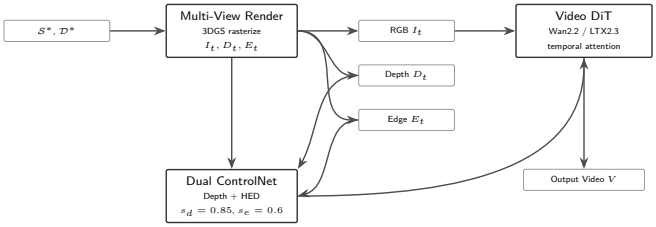

Figure 14: **ArtiFlow (Variant B).** Monochrome line style, no fills, maximum clarity.

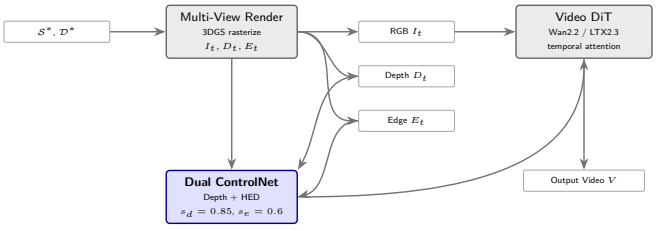

Figure 15: **ArtiFlow (Variant C).** Grayscale with blue accent on the dual-ControlNet conditioning, highlighting the control mechanism.
